The history of **MTE-THOMSON** begins under the name MTE (Metalúrgica Termo-Elétrica) in **1957**, coinciding with the birth of the automotive industry in Brazil.

With plenty of dedication and courage, the company has earned its place as one of the main Brazilian suppliers of auto parts.

In **1975**, the joint venture with Thomson International Co. led to the production of thermostats. Since then, MTE-THOMSON has established itself as a specialist in products for engine temperature control.

In **1990**, MTE-THOMSON incorporated automotive ceramics in its technology, thus becoming the only manufacturer of PTC and NTC thermistors in Latin America.

In **2001**, it became the first manufacturer of oxygen sensors in Brazil.

Today, after **200 million** parts produced and offering more than 3,000 different items, MTE-THOMSON has one of the most complete temperature control and engine management product lines, supplying both OEM and aftermarket customers in more than 100 countries worldwide.
